Procedure for As Builts for Subsurface Sewage Disposal Unit

Two (2) as builts plans are to be submitted to the Ashland Board of Health office.

Construction As Built # 1

The construction as built consists of the location and elevations of the installed subsurface sewage disposal unit. The registered engineer/sanitarian shall certify that the subsurface sewage disposal unit has been installed according to the original plan. Any deviation in the installed system is to be noted on the as built plan. The registered engineer or registered sanitarian shall stamp the as built plan.

Note: The construction as built is to be submitted before the final inspection of the construction of the system.

Final Grade As Built # 2

The as built consists of the final grades (to include grading over the leaching facility and other parts of the installed subsurface sewage disposal unit, all altered grades from the original grades), driveway location, well location, and house location. This plan is to be signed, stamped and certified that the final grades are constructed in accordance with the original plans.

Note: The final as built is to be submitted before the final grade inspection.
