Menands, NY 12204

Patricia / Domenica,

Please let this letter serve as a correction notification regarding the RF Emissions Analysis Report completed by Fox Hill Telecom, dated **August 7, 2025**, for the **T-Mobile** proposed **4BN0510A – Oregon Club** site located at **117 Oregon Road** in **Ashland MA**.

The prior referenced report erroneously states in the first paragraph on **Page 4, Section 3.0**, that *“Based on the theoretical modeling analysis performed, there are areas that exceed the FCC’s General Public and/or Occupational limits at this site. T-Mobile must ensure proper mitigation is installed at the site in order for the site to remain in compliance”*. This statement was included in the report erroneously as there are no areas that exceed the FCC’s General Public and/or Occupational limits for radio frequency emissions at any of the analyzed areas accessible by the general population, as identified as part of the results in the sections of the completed RF Emissions Analysis Report following this statement.

The correct language that should have been provided in the report is as follows: *“Based on the theoretical modeling analysis performed, there are no generally accessible areas that exceed the FCC’s General Public and/or Occupational limits at this site”*. This statement identifies that there are no mitigation solutions required since there are no exceedances to these analyzed generally accessible areas.

Fox Hill Telecom will provide a corrected copy of the report dated September 12, 2025, for this site. I am very sorry for any confusion that this language error may have caused, and I am available to provide any additional information required to support our findings from this study

Sincerely,

Scott Heffernan
Principal RF Engineer
