

Massachusetts Department of Public Health Arbovirus Surveillance Program Report

Key Public Risk Communication Messages for This Week:

MDPH has identified 12 West Nile virus positive mosquito samples collected in Barnstable, Middlesex and Suffolk Counties. The populations of mosquito vectors that transmits WNV and EEE are above average and increasing due to intense regional precipitation events and continued warm weather. Avoid mosquito bites by using EPA approved repellents, appropriate clothing and avoiding peak mosquito activity between dusk and dawn. Remove standing water by emptying containers and tarps.

Check your risk levels throughout the season by visiting our interactive site <https://www.mass.gov/info-details/massachusetts-arbovirus-update>

Please review the 2021 MDPH Surveillance and Response Plan for updates to risk levels and risk messaging. <https://www.mass.gov/doc/2021-arbovirus-surveillance-and-response-plan/download>

Establish good mosquito avoidance habits now

• Teach children to be aware of mosquito activity around them and avoid it	
• Pick a repellent with an EPA-approved active ingredient	• Use long sleeves to cover up when possible
• Remove standing water to help reduce mosquito populations	• Repair screens

WNV and EEE Virus Surveillance Summary Results contained in this report reflect data inclusive of MMWR Week 28 (Sunday, 07/11/2021-Saturday, 07/17/2021)	
Mosquito Surveillance	
Number of Mosquito Samples Tested	2141
Number of WNV Positive Samples	12
Number of EEE Positive Samples	0
Equine/Mammal Surveillance	
Number of Mammal Specimens Tested	1
Number of WNV Positive Horses	0
Number of EEE Positive Horses	0
Number of other EEE Positive Mammals	0
Human Surveillance	
Number of Human Specimens Tested	42
Number of Human WNV Cases	0
Number of Human EEE Cases	0
